Assignment 0.

Write a program for counting words in a line. Any sequence of characters without separators is considered a word. Separators are spaces, tabs, newlines.

The input string is passed to the program through the terminal as the argv [1] parameter. The program should display the number of words on the screen.

Compilation example:

gcc -o A0.o A0.cpp

or

g++ -o A0.o A0.cpp

Launch example:

./A0.o 'enter your string here'
